One-Decimal Clinical Thermometer

- b. After a. LCD shows the last-time temperature about 2sec. (If the memory function is optional)
- c. After b., LCD shows the self-test temperature (37.0±0.1 °C) about 1 sec. The °C or °F mark will flash at the speed of 1Hz.
- d. After c., LCD shows the higher measured temperature always, the °C (°F) mark will flash at the speed of 1Hz.
- e. If the temperature < 32.0 °C (or 90.0 °F), the display show Lo °C (or Lo °F).
- f. If the temperature ≥ 43.0°C (or 109.9°F), The display show Hi °C (or Hi °F).
- g. The LCD always show the higher temperature during the temperature measurement.
- h. After power on, the measurement time is over 16 sec and the measured temperature does not change within the stable time, the measurement will be over and the °C (°F) mark flash stop.
- i. For SC31106C, when measurement is over and if the temperature ≥37.8 °C (100°F). In this case the buzzer alarms “BI-BI-BI--- BI-BI-BI---” for 10 sec, as follows:

BI --- BI --- BI ----- BI ---

BI: 0.125sec

---: 0.125sec

-----: 0.375sec

if the temperature < 37.80°C (100°F), the buzzer alarms “BI-BI-BI-BI-” for 10 sec, as follows:

BI --- BI---

BI: 0.5sec

---: 0.5sec

j. It will automatically power off after measurement is stable and the system is still on more than 8 min 40sec(Fsys=32kHz)

k. When measurement is over and the beep sound is terminated, if the temperature rises within 8 min 40 sec, the measurement will start again, but the °C mark will not flash and the buzzer will not output also.

l. During bi sound is on 10 sec, the temperature is not measurement.

- When power off: the stand-by current ≤1μA.
- The frequency of buzzer is 6k(VSS) or 8kHz (VDD) by pin option.
- Measurement to 0.1 degree at °C.
- Sensor use 503ET.
- Reference resistor is the value sensor in 37.0 °C.
- The low battery and “M” flag can not display when the temperature show Hi or Lo.
- When battery voltage is low, the battery mark “▲” flashes at the speed of 1Hz and the measurement maybe not accurate. The low TEST pin connect to Vss, the measured temperature will be the actual temperature of voltage detect: 1.35V±0.05V.
- During the process of mass production, in order to adjust the reference resistance (RF), let the measured environment. The LCD can be up or down changed, not always show the higher one.
- There are 4 kinds of stable time to be selected; 4 sec, 8 sec, 16 sec and 32 sec.

Time	STSEL1	STSEL2
4 sec	VSS	VDD
8 sec	VDD	VSS
16 sec	VDD	VDD
32 sec	VSS	VSS
