

**General Description:**

This product is a general-purpose counter fabricated with CMOS technology. It is designed to drive 1/2 bias, 1/3 duty cycle LCD with a 1.5V battery as its power supply. The IC can be used in many applications, such as step-counter.

**Features:**

- Single 1.5V battery operation
- Count from 00000 up to 99999
- Advance by 1 for each trigger
- Debounce circuitry
- Bonding selection for 3-digit / 5-digit application
- All digits are displayed, including leading zeros
- Hold on the maximum count, i.e. 99999(5-digit application) or 999(3-digit application)
- Direct continuous multiplexed LCD drive capability
- Built-in RC oscillator
- Built-in voltage doubler
- Automatic power-off after 2 minutes from the last trigger
- Awake by a new trigger with the display advanced by 1
- Reset function: During working, after pressing RESET for more than 2 sec, it will display 88888 or 888 for **1** second, then reset the count to 00000 or 000. Reset function will not work after auto power-off
- Power on LCD test by displaying 88888 or 888 for **1** sec
- Error Display for SEL bonding failure
